

# IPCC Inventory Software

Taking some of the pain out of transparency

Rob Sturgiss

IPCC TFI TSU *Head of Operations*

**ipcc**  
INTERGOVERNMENTAL PANEL ON **climate change**

# Transparency and tools

- Transparency has always been critical  
✓ Yes
- Transparency is not always easy  
✓ true
- Tools and software are fundamental: Practical help  
✓ Yes
- IPCC software is something that you choose  
✓ Yes

# Transparency has always been critical

## UNITED NATIONS FRAMEWORK CONVENTION ON CLIMATE CHANGE

### Article 4

#### COMMITMENTS

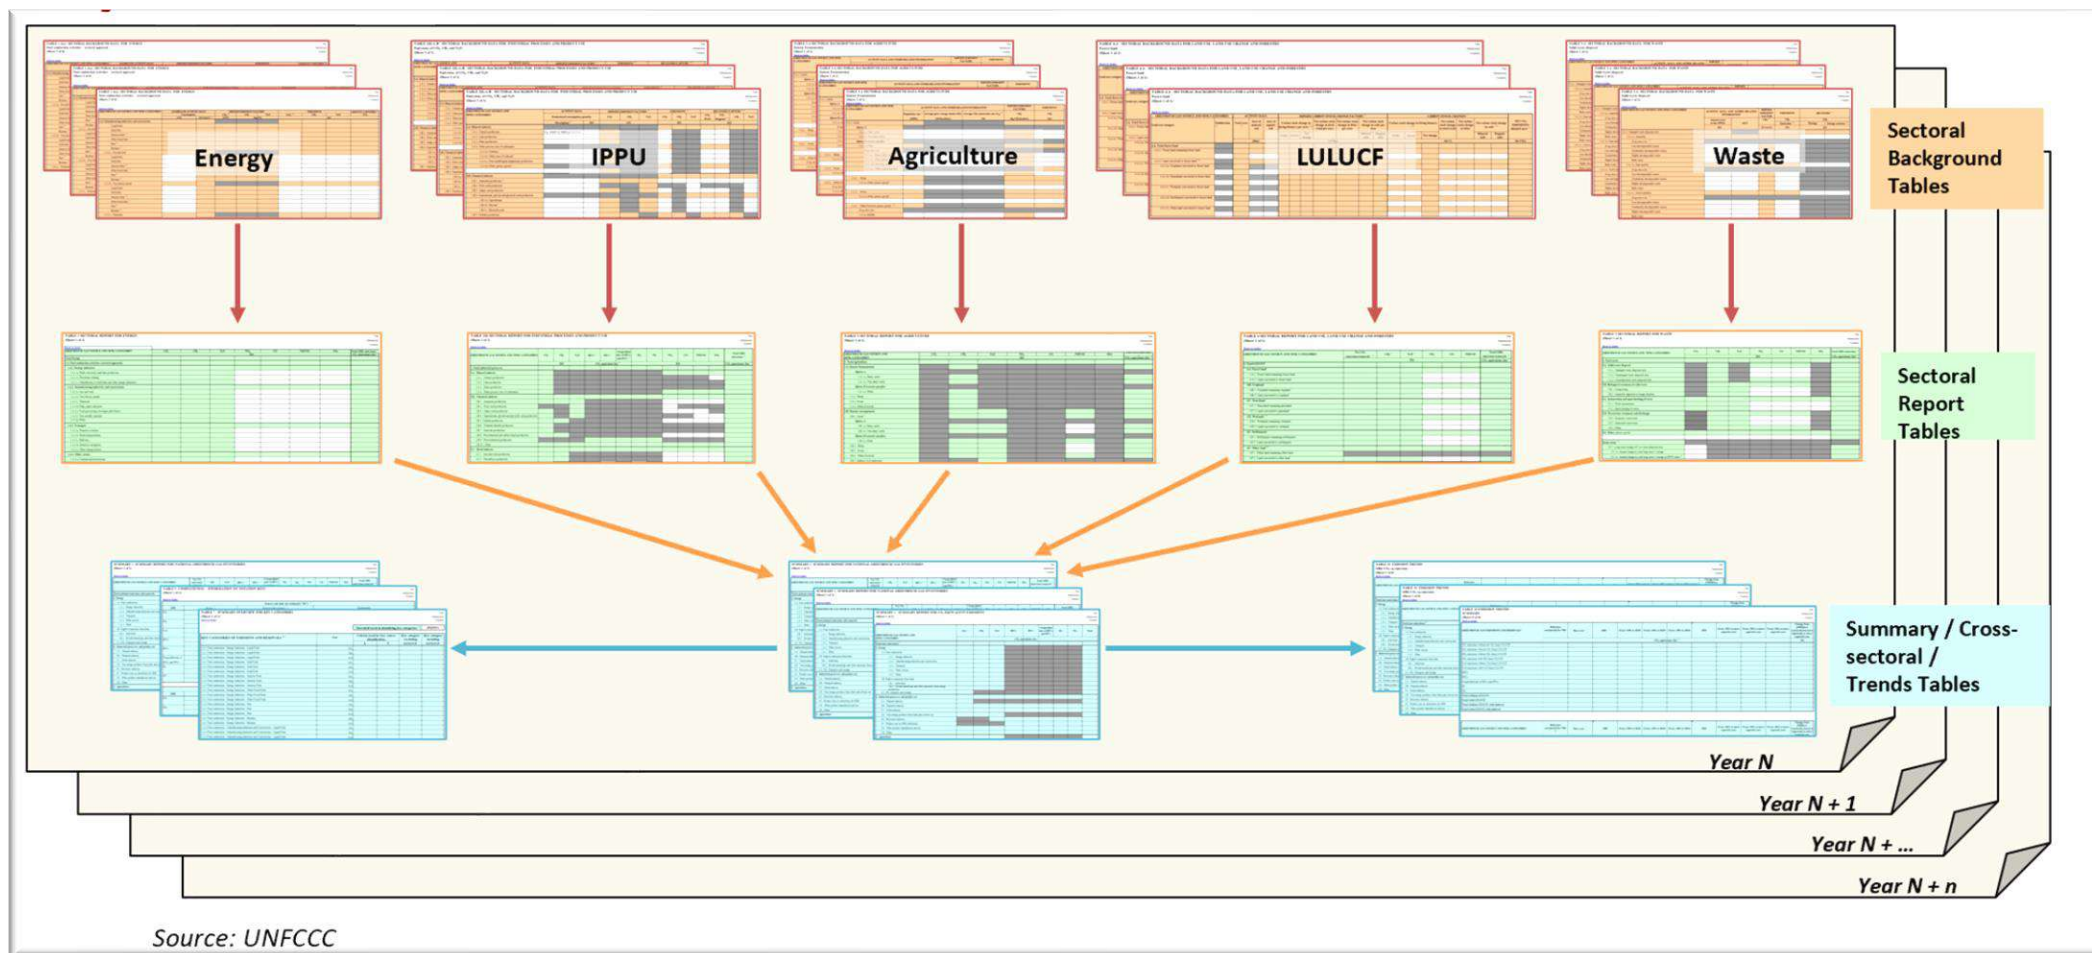

1. All Parties, taking into account their common but differentiated responsibilities and their specific national and regional development priorities, objectives and circumstances, shall:

(a) Develop, periodically update, publish and make available to the Conference of the Parties, in accordance with Article 12, national inventories of anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, using comparable methodologies to be agreed upon by the Conference of the Parties;

UNITED NATIONS  
1992

# Transparency can take a lot of effort

# Inventory tools are fundamental: offer practical help

## ➤ Some examples:

### ➤ Australian Greenhouse Emissions Information System

- AGEIS (2005)

### ➤ Thai Greenhouse Emissions Information System

- TGEIS (2019)

### ➤ IPCC Inventory Software systems (2012-24)

# The IPCC Inventory Software is something you choose

- Supported by the IPCC since 2012
- Encouraged by the parties to the Paris Agreement

- ✓ **Decision 5/CMA.3** mandates the UNFCCC to develop reporting tools for the electronic reporting of the tables and formats, including common reporting tables (CRT) for GHG inventory reporting .
- ✓ Decision 5/CMA.3 requests the UNFCCC secretariat **to facilitate interoperability** between the reporting tools and the IPCC inventory software and invites the IPCC to participate in this effort.

# Why choose the IPCC Inventory Software?

---

Replaces excel calculation sheets ....(& consultants.....)

---

Authority, credibility & confidence of applying IPCC methods

---

Access to international / UN datasets

---

Archives your results for next time

---

Automatically feeds the ETF Reporting tool

---

# What is interoperability?

- Interoperability = integration
- The IPCC Inventory Software prepares your data for the population of your UNFCCC Common Reporting Tables
- If you choose the IPCC Software..
  - it means you may not need to use UNFCCC ETF tool much at all

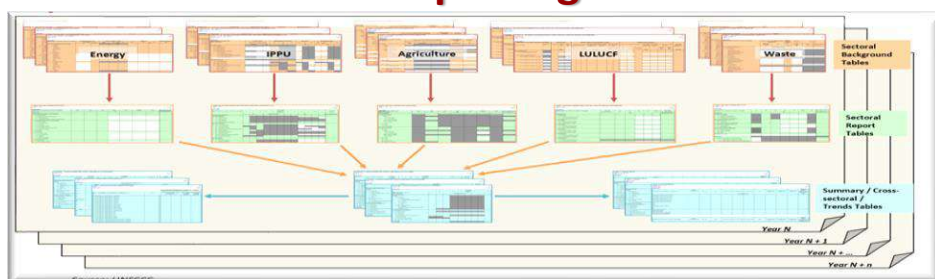

# IPCC Interoperability: populates the ETF tool

## Excel files and ETF

1. Calculate emissions in many Excel sheets

2. Manually insert results into the UNFCCC ETF Reporting Tool

### UNFCCC ETF Reporting Tool

## IPCC - ETF integrated software

Calculate emissions in IPCC Software

Preview Visualised CRTs

Produce JSON file and upload to populate the UNFCCC ETF Reporting tool

### UNFCCC ETF Reporting Tool

INTERGOVERNMENTAL PANEL ON climate change

# Who is using the IPCC Inventory Software?

Indicated use of IPCC Inventory Software ?  
(in national submission or a communication)

=

**83**  
**Parties**

Use of IPCC Inventory Software, by region

LDCs and SIDS?

**ipcc**  
INTERGOVERNMENTAL PANEL ON climate change

# What are Countries Saying?

- ✓ The extent to which the *Software* is used, varies, one or more sectors, some only for QA

Systematization and processing of data is easier thanks to the *Software*

The *Software* offers a better opportunity to choose variables closer to our country

The *Software* is used as the national archiving system

Allows typing errors to be considerably eliminated, while avoiding methodological errors

The commenting feature in the *Software* is also used to input remarks in respective fields for continuity and improvement of the inventory in the future

# Available resources

- ✓ Preparation of your GHG inventory
  - ✓ Will be supported by working knowledge of the 2006 IPCC Guidelines for National GHG Inventories
  - ✓ The *Software Users' Guidebooks*
    - An integrated guide to the Guidelines & the software
- ✓ IPCC TFI TSU Support @ [ipcc-software@iges.or.jp](mailto:ipcc-software@iges.or.jp)

**Download the *Software* at**

**<https://www.ipcc-nggip.iges.or.jp/software/index.html>**

(32 vs 64 bit versions)

Come to the IPCC Inventory Software Presentation  
**at SBSTA....**

5 June  
13:15 – 14:30pm  
Room: Bonn

# Come to the IPCC Inventory Software Demonstration workshop

3 days  
August 2024

**ipcc**  
INTERGOVERNMENTAL PANEL ON climate change

# Example - Estimating GHG Emissions from Fuel Combustion

## 1. Acquire the necessary activity data

- The *Software* and the IPCC Guidelines identify necessary input data
- ✓ In absence of detailed national statistics, may use international datasets
- UN Statistics Division publishes energy data for over 200 countries
- These data can provide an estimate for the Sectoral and Reference Approach

# Three worksheets to deal with Fuel Combustion

GHG emissions from Fuel combustion (~70% of national emissions, excluding LULUCF)

1. Fuel Manager, 2. Fuel Consumption Data, 3. Fuel Combustion Emissions:

Fuel Consumption Data

Fuel Combustion Emissions

Worksheet

Sector:

Energy

Category:

Fuel Combustion Activities

Subcategory:

1.A.1.a.i - Electricity Generation

Sheet:

Fuel Consumption Data

Data

Fuel Type

(All fuels)

Equation 2.4

Fuel Manager...

# Basic Approach - AD - Fuel Consumption Data worksheet

## 2. Enter activity data

- ✓ Enter from your energy balance, in TJ, the amount of each fuel consumed e.g. for Electricity generation

✓ **Fuel Consumption Data** Fuel Combustion Emissions

Worksheet

Sector: Energy

Category: Fuel Combustion Activities

Subcategory: 1.A.1.a.i - Electricity Generation

Sheet: Fuel Consumption Data

Data

Fuel Type (All fuels)

2022

Minimum country-specific data—  
type and amount of fuel  
consumed

Equation 2.4

Subdivision	Fuel	Consumption Unit	Consumption (Mass, Volume or Energy Unit)	Conversion Factor (TJ/Unit) (NCV)	Total consumption (TJ)				
S	F	U	C	CF	TC = C * CF				
Northern	Municipal Wastes (nonbiomass fraction)	TJ	4,000	1	4,000				
Power City 1	Charcoal	TJ	200	1	200				
Power City 1	Liquefied Petroleum Gases	TJ	2,900	1	2,900				
Unspecified	Anthracite	TJ	40,000	1	40,000				
Unspecified	Gas/Diesel Oil	TJ	1,000	1	1,000				
Unspecified	Natural Gas (Dry)	TJ	10,000	1	10,000				
Unspecified	Peat	TJ	3,500	1	3,500				
*									
Total					61,600				

# Basic Approach - AD - Fuel Consumption Emissions worksheet

## 3. Apply IPCC EF and Calculate GHG Emissions

- ✓ May refine estimates by disaggregating to e.g. regions, technologies, and reporting the quantity of CO<sub>2</sub> captured

Fuel Consumption Data **Fuel Combustion Emissions**

Worksheet

Sector: Energy

Category: Fuel Combustion Activities

Subcategory: 1.A.1.a.i - Electricity Generation

Sheet: Fuel Combustion Emissions

Data

Fuel Type: (All fuels)

2022

User may select all IPCC defaults EFs from a dropdown, or overwrite with user-specific EFs

Subdivision		Fuel	Total consumption (TJ)	CO2 Emissions (Gg CO2)	CH4 Emissions (Gg CH4)	N2O Emissions (Gg N2O)
S	F	TC	CO2	CH4	N2O	
Northern	Municipal Wastes (nonbiomass fraction)	4,000	0	0	0	
Power City 1	Charcoal	200	17.4	0.02	0.0004	
Power City 1	Liquefied Petroleum Gases	2,900	177.99	0.00145	0.000029	

Technology			CO2		CH4		N2O		
Type of Technology	Technology penetration (%)	Consumption (TJ)	CO2 Emission Factor (kg CO2/TJ)	Amount Captured (Gg CO2)	CO2 Emissions (Gg CO2)	CH4 Emission Factor (kg CH4/TJ)	CH4 Emissions (Gg CH4)	N2O Emission Factor (kg N2O/TJ)	N2O Emissions (Gg N2O)
T	P	C=TC*(P/100)	EF(CO2)	Z	CO2=C*EF (CO2)/10 <sup>6</sup> -Z	EF(CH4)	CH4=C*EF (CH4)/10 <sup>6</sup>	EF(N2O)	N2O=C*EF (N2O)/10 <sup>6</sup>
Technology 4	100	2,900	63,100	5	177.99	0.5	0.00145	0.01	0.000029
Total		2,900			177.99		0.00145		0.000029

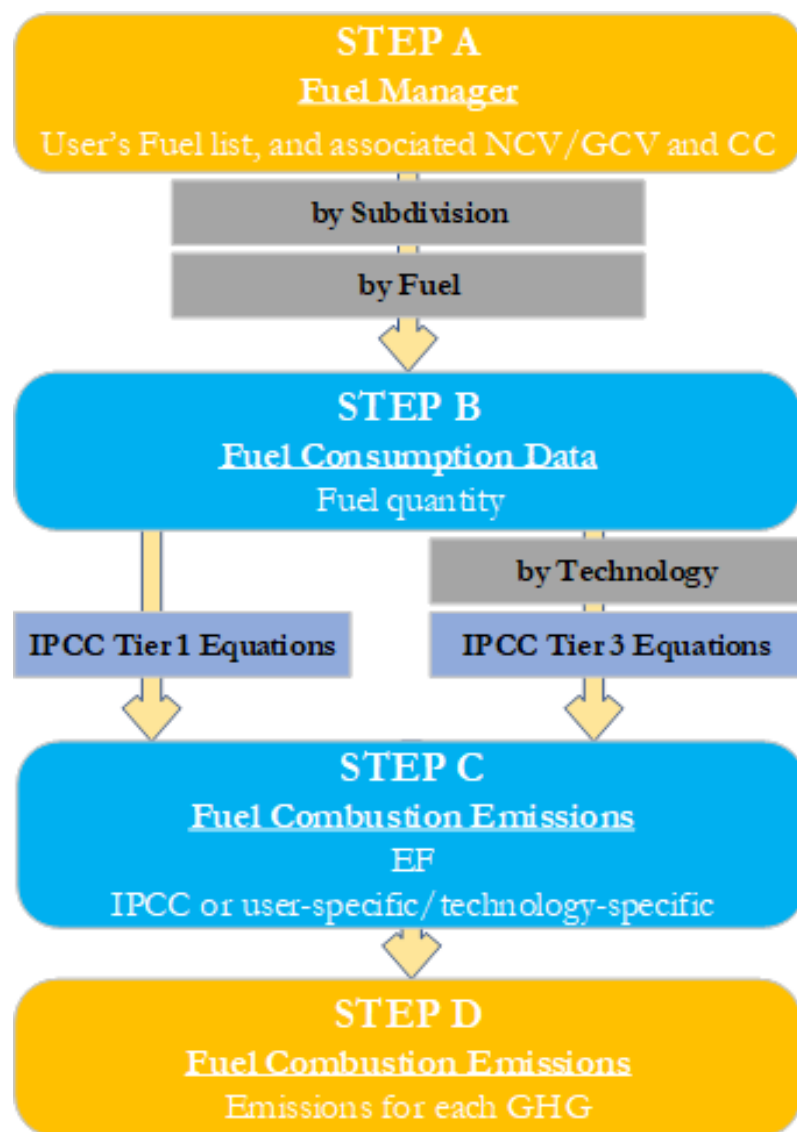

Equation 2.4

# Ongoing Work

- ✓ **Paris Agreement requirements**
  - Interoperability with ETF reporting tool, to be concluded by **June 2024** (adding IPPU sector F-gases, and Indirect emissions tables)
- ✓ **Extending capacity for Uncertainty Analysis and Key Category Analysis**
- ✓ **Facilitating export/import of data (Time series)**
- ✓ **Completing publication of Guidebooks**
- ✓ **Step-by-step instructions, *in a ppt/video format*, to implement IPCC default methods**

# Guidebook - Structure

For each category, the Guidebook includes, *inter alia*, the following information:

- ✓ The relevant equations from the *2006 IPCC Guidelines*
- ✓ A description of the relevant worksheets.
- ✓ **A User's Work Flowchart**
  - Step A: Fuel Manager
  - Step B: Fuel Consumption Data
  - Step C: Fuel Combustion Emissions - EFs
  - Step D: Fuel Combustion Emissions - Results
- ✓ Step-by-step guidance to input **activity data** and **emission factor** information
- ✓ **Results**
